 - **CMS LITE** (32CH solution)
Low system requirements / basic functions built-in
- You can choose the suitable version depend on your demand.

Mobile APP, EagleEyes

EagleEyes is a mobile app designed for mobile surveillance on android and iOS mobile devices, allowing you to see what's going on at your home or office, receive abnormal event notifications immediately, and search for event videos no matter where you are.

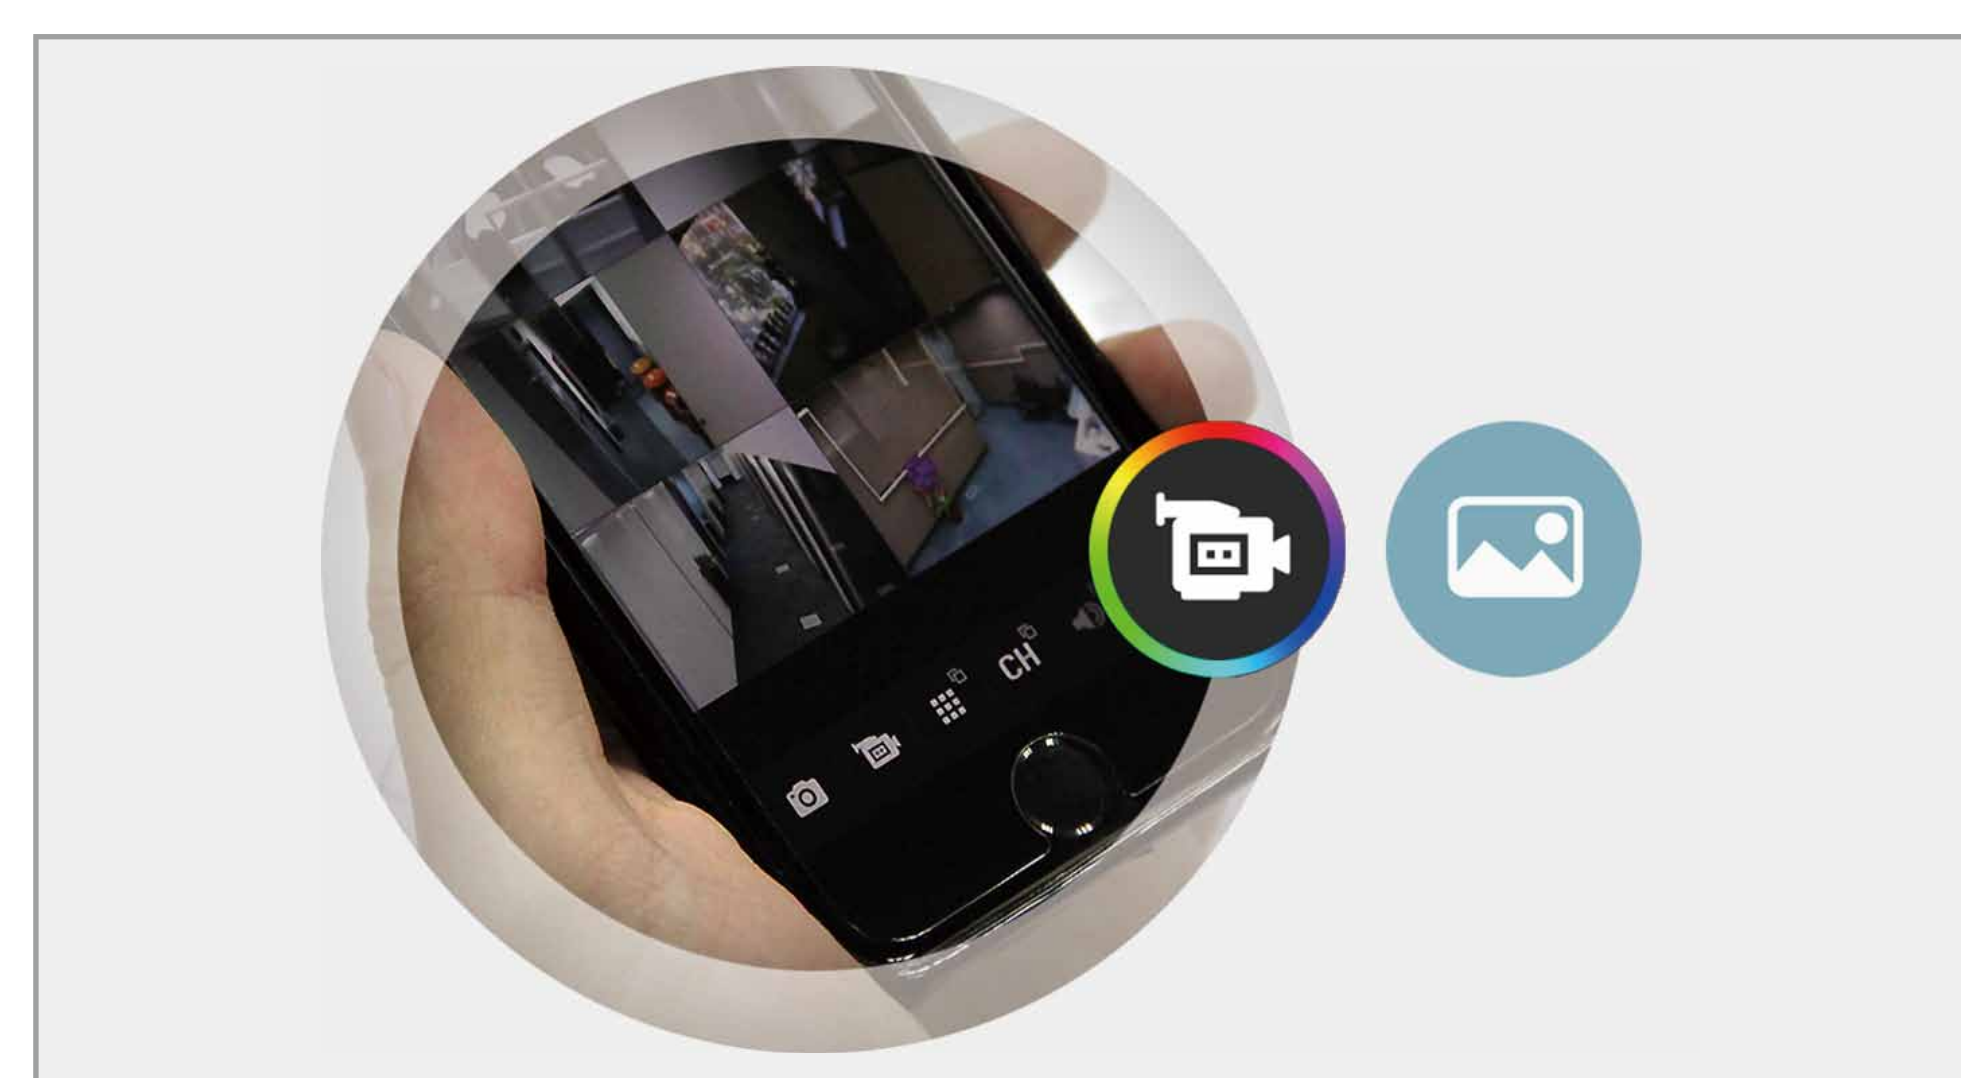

EaZy Search & Backup

In EagleEyes, video search is easy via the calendar view, allowing you to quickly find the date and time you want in one graphical interface. When you find the video you need, you can further select the time range to extract and save the footage to a cloud drive or in the iPhone (Media), or send it by Email.

Live Record

During live view, you can manually click on the live record icon on EagleEyes to record what is going on, and the footage will be saved to "Media" of EagleEyes on your mobile device.
